

Full-Stack Software Engineer

Full-Stack Software Engineer and AI Enthusiast with strong experience building web, mobile, and AI-powered solutions. Recent graduate from SIMAD University with a passion for leveraging technology and artificial intelligence to solve real-world challenges. Skilled in Python, JavaScript, React, and backend systems with proven experience through academic and professional projects

Work Experience

Software Engineer | Taskplete | Feb 2024 – Aug 2025 | Mogadishu, Somalia

- Developed and deployed ERP and management system modules for Somali businesses.
- Built backend systems using Python and PostgreSQL for real-time reporting and analytics.
- Managed server deployments with Nginx, Gunicorn, and domain configurations (CPanel/VPS).
- Reduced system errors by 30% through testing, debugging, and performance optimizations.
- Conducted client training, user support, and troubleshooting to ensure smooth adoption.
- Collaborated with ICT team to improve user interfaces and system functionalities, boosting customer satisfaction.

Technical Skills

Languages: Python, JavaScript, PHP, Flutter

Frameworks & Tools: React, MERN Stack, Git/GitHub

Databases: PostgreSQL, MySQL

DevOps: Nginx, Gunicorn, CPanel, VPS Deployment

Other: Server Management, Data Structures & Algorithms

Education

B.Sc. Information Technology, Simad University | 2020 – 2024

Diploma of High School, Hamar Boarding School | 2016 – 2019

Key Projects

- **AI Procurement Compliance Agent:** Developed to automate and validate the procurement process. Its key functions include checking purchase requisitions for compliance and quality standards, automatically generating and sending RFQs/RFPs to vendors with multilingual support (Arabic, English, French), and featuring an integrated audit and logging system built on SharePoint.

- Travel Agency Management System – Full-featured booking & management platform.
- Hotel Management System – Automated hotel operations & guest management.
- RFID-Enhanced Queue Management System – Improved service efficiency with IoT.
- IoT Cloud-Based Temperature & Humidity Monitoring – Real-time environmental monitoring.
- Dalab App – Restaurant food ordering app (Flutter + Supabase).
- Cimilo Sheeg – Real-time weather forecasting mobile app.
- Todo App – Task management app with reminders and calendar integration.

Leadership & Community Involvement

- Founder, Dalsan Tech Community- Built a platform for Somali tech enthusiasts to collaborate and share knowledge.
- Founder, Innovatech-Creations – Delivered Small digital and software solutions for local businesses
- Active participant in networking workshops, digital generation building seminars, and tech events.
